EDUCATION

The University of Texas at Austin

May 2029

B.S. Computer Science

Relevant coursework: Data Structures, Computer Architecture, Autonomous Robots

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL, C/C++, R, HTML, CSS, Bash/Shell, Swift

Frameworks & Tools: React, React Native, Next.js, Node.js, ROS2, Supabase, PostgreSQL, AWS, Git, Linux, OpenCV

Certifications: AWS Certified Cloud Practitioner (2025), Unity Certified Programmer (2024)

EXPERIENCE

Todd Agriscience – Software Engineer

Jan 2026 – April 2026

- Led frontend overhaul of marketing website, redesigning core user flows for **10,000+** monthly active users
- Reduced page load times by **~35%** using SSR and Tailwind CSS while achieving full WCAG accessibility compliance
- Engineered secure and scalable backend APIs using Node.js and SQL to process user data and handle client requests

Dell Technologies – Excel with Dell Member

Feb 2026 – April 2026

- Selected as **1 of 51 (from 325+)** to engineer enterprise-grade AI solutions as part of Dell's technical case competition
- Built an end-to-end Python NLP pipeline leveraging LDA topic modeling and sentiment scoring for customer feedback
- Developed a full-stack analytics dashboard to visualize sentiment trends, topic distributions, and KPIs

Learning Agents Research Group – Undergraduate Researcher, UT Austin

Jan 2026 – Present

- Architected autonomous ushering platform with Next.js/Supabase with ROS2/Nav2 BWI robot and **90%** nav success
- Engineered backend with concurrent ROS2 nodes, async task orchestration, and PostgreSQL message queuing
- Built mobile platform with conflict-aware seat allocation across 6 destinations and a **5 cm** precision for **30+** trials

Stellar Learning – Software Engineer

Jun 2025 – Aug 2025

- Shipped frontend features for an AI-powered educational platform serving **25,000+** users across web and mobile
- Redesigned UI with light mode, improved routing, and enhanced note-taking and flashcard tools across **8+** pages
- Improved page responsiveness by refactoring state management in Svelte across high-traffic components

PROJECTS

Wavepoint – Indoor Navigation App | React Native (Expo), Supabase, OpenCV, Python

Jan 2026 – Present

- Won **Best Tech** award for an indoor navigation system using OpenCV, OCR, and A* pathfinding for multi-floor routing
- Designed mobile-first UI with live location tracking, pedometer-based step counting, and real-time friend sharing
- Engineered React Native client with Supabase real-time subscriptions, geospatial queries, and sensor fusion via Expo

AllClear – Emergency Response App | React, Node.js, MongoDB, OpenWeatherMap API, Leaflet.js

Jul 2025

- Placed **1st** out of **95+** participants in a **36-hour** full-stack hackathon, delivering a production-ready web application
- Built a scalable emergency response web application, integrating **5+** real-time weather and disaster APIs for live data
- Implemented secure authentication and geospatial visualizations, including JWT auth, and layered disaster maps

SkyPocket – Full-stack Mobile Travel Companion | React Native (Expo), TypeScript, Firebase

Sept 2025 – Dec 2025

- Built a travel app for trip management, currency conversion across **50+** currencies, and smart product detection
- Implemented serverless Firebase backend with Google Vision and SerpApi, sub-second processing for **500+** requests
- Developed a modular React Native frontend with Tailwind CSS, supporting **20+** trips and dynamic finance dashboard

Wamp+ – Apartment Housing Guide | Next.js, Tailwind CSS, MapLibre, Supabase, PostgreSQL

Jan 2026

- Built full-stack housing platform for UT students to compare **35+** apartments via unit filtering across **8+** attributes
- Designed PostgreSQL schema in Supabase with row-level security and Auth-gated writes across buildings and units
- Engineered interactive MapLibre GL map and stateful comparison engine with dynamic multi-attribute filtering

LEADERSHIP

Texas Product Engineering Organization – UT Austin | Engineering Lead

Sept 2025 – Present

- Selected as 1 of 10 (**out of 170+**) fellows to develop novel, nonprofit software solutions across the Austin community
- Developed and taught 8-week JavaScript curriculum to **20+** students covering Git, React, Node.js, and system design
